github.com/Minashehata11 Alexandria, Egypt

SUMMARY

Results-driven Full-Stack .NET Developer with hands-on experience building scalable web applications and RESTful APIs using ASP.NET Core and React. Proven track record of optimizing system performance, reducing response times by 35%, and delivering high-impact solutions across e-commerce, banking, and CMS domains. Seeking to leverage technical expertise in a collaborative environment to drive innovation and deliver measurable business value

EXPERIENCE

Full-Stack Developer

EdgeCom

06/2025 - Present

- Engineered high-performance banking and CMS applications using ASP.NET Core API and React, delivering solutions that improved transaction processing speed by 25%
- Designed and executed full-stack features from backend services to responsive frontend components, reducing page load times by 30% through optimized API integration

.NET Developer

ITSpark

07/2024 - 05/2025

- Enhanced MVC application performance by troubleshooting critical bugs, refining code quality, and expanding user-focused features, resulting in a 40% reduction in reported issues
- Led key e-commerce platform enhancements that increased checkout conversion by 15%, reduced cart abandonment by 22%, and improved overall functionality and user experience

.NET Developer

Route

10/2023 - 05/2024

- Optimized .NET API performance, boosting response time by 35% through LINQ query refinement and reducing database load by 20% via strategic caching implementation

EDUCATION

Bachelor of Computer and Artificial Intelligence

Helwan University

2020 - 2024

- Graduation Project: Secure Voting System - Grade: Excellent

SKILLS

Backend

C# · ASP.NET Core · Web API · MVC · Entity Framework · SQL Server · LINQ · Dapper

Frontend

React · JavaScript · HTML5 · CSS3 · Bootstrap · Tailwind CSS

Tools & DevOps

Git · Docker · Redis · CI/CD Pipelines

Architecture

SOLID Principles · Design Patterns · Clean Architecture · Agile/Scrum

PROJECTS

E-Commerce API

github.com/Minashehata11/Ecommerce-Store

- Executed Clean Architecture with Repository and Unit of Work patterns, integrated Redis caching, and deployed secure payment services
- Improved API performance by applying the Specification Pattern for optimized search and filtering operations

Secure Voting System

github.com/Minashehata11/VotingSystem

- Built high-security voting service with CQRS pattern, JWT authentication, and robust 3-layer architecture
- Integrated Flask API for face recognition and ID data extraction using Python, enhancing voter verification accuracy

Clinic Management System

github.com/Minashehata11/Clinical.BAL

- Enhanced full-stack clinic management platform using 3-layer architecture with secure authentication
- Designed SQL Server database schema and executed business logic with Unit of Work and Repository patterns
